# EFU MOBILE PHONE ECOSYSTEM LICENCE v1.0

**Complete Mobile Phone Ecosystem Audit Standard**
**Simor István**
**Release: 2026.01.12**

---

## 0. Purpose and Scope

Experimental **EFU-based "cradle-to-grave" licensing framework for complete smartphone lifecycle** – from **rare earth mining to TikTok scrolling**.

**Measures ALL sectors:** Mining → Manufacturing → Logistics → Social Media → E-waste. **NOT a replacement for** consumer protection, labor, or recycling regulations, but **systemic accountability protocol**.

**Question:** Does one iPhone's **40 EFU = 2 human-years** justify itself?
**Answer:** The **EFU Mobile** metric reveals.

---

## I. Core Concepts

## EFU-Mobile (EFU-MP) – Complete Supply Chain

```text
1. EFU-MINING_MP: Rare earths + lithium (104.20)
2. EFU-CHEM_MP: Semiconductor + chemical manufacturing (104.28)
3. EFU-LOG_MP: Global logistics (104.26/104.29)
4. EFU-SOCIAL_MP: Cognitive usage (104.42)
5. EFU-NET_MP: 5G network + data traffic
6. EFU-DEVICE_MP: Battery + screen wear
7. EFU-WASTE_MP: E-waste (104.30)
```

## Mobile Sovereignty Gap (SS_MP)

```text
SS_MP = TEFU_MP_total – Regional Digital Carrying Capacity (RDHK_MP)
```

## MROI_MP

```text
MROI_MP = Valuable_communication / TEFU_MP
```

---

# II. TEFU_MP Master Formula

```text
TEFU_MP = 1.5×EFU-MINING + 1.8×EFU-CHEM + 1.2×EFU-LOG +
        2.5×EFU-SOCIAL + 1.5×EFU-NET + 1.2×EFU-DEVICE + 1.0×EFU-WASTE
```

---

# III. Component Breakdown (iPhone 16, 3-year cycle)

| Phase | EFU | Sector | Example |
|---|---|---|---|
| **Mining** | 8.0 | 104.20 Mining | Congo rare earth child labor |
| **Manufacturing** | 5.0 | 104.28 Chemical | TSMC Taiwan chip fab |
| **Logistics** | 2.0 | 104.25/29 | China→EU ship+plane |
| **Cognitive** | 18.0 | 104.42 Social | 90m TikTok/day × 3yrs |
| **5G Network** | 4.0 | New | 50GB/month data |
| **Device Wear** | 2.5 | New | Battery + OLED degradation |
| **E-waste** | 0.5 | 104.30 Waste | 250g toxic refuse |
| **TOTAL** | **40 EFU** | **2 human-years** | **iPhone 16** |

---

# IV. License Categories

| Level | TEFU_MP (3yrs) | MROI_MP | Label | Example |
|---|---|---|---|---|
| **1** | <20 EFU | ≥1e-1 | **EFU-MP SOVEREIGN** | Fairphone |
| **2** | 20-40 EFU | ≥5e-2 | **EFU-MP BALANCED** | iPhone 16 |
| **3** | 40-60 EFU | ≥1e-2 | **EFU-MP DEFICIT** | Samsung Galaxy |
| **4** | >60 EFU | <1e-2 | **EFU-MP CRITICAL** | Cheap Chinese import |

---

# V. Regional Calibrations

| Country | RDHK_MP (EFU/person/year) | Avg TEFU_MP | SS_MP |
|---|---|---|---|
| **EU** | 10 EFU/year | 13.3 EFU/year | +3.3 DEFICIT |
| **USA** | 12 EFU/year | 15 EFU/year | +3 CRITICAL |
| **China** | 8 EFU/year | 20 EFU/year | +12 CRITICAL |

---

# VI. Pilot Audit: iPhone 16 Pro (3 years EU)

```text
Input: 1 phone × 3 years average usage

TEFU_MP = 40 EFU (2 human-years)
RDHK_MP = 10 EFU/year × 3 = 30 EFU
SS_MP = +10 EFU → **BALANCED (Level 2)**
```

VALUE: 1500 hours communication = MROI 0.08

**Comparison:** Nokia 3310 (2001) = **2.5 EFU → SOVEREIGN**

---

# VII. Implementation

```text
1. TAX: TEFU_MP-based "digital waste tax"
2. INCENTIVE: MROI >0.1 = VAT reduction
3. LABEL: "EFU-MP BALANCED" marketing badge
4. RECYCLING: EFU-WASTE_MP tax rebate
```

Data sources:
✓ GSMArena specifications
✓ 104.42 Social Media usage data
✓ Rare earth reports (USGS)

---

# VIII. "GAME-CHANGING" MESSAGE

```text
"1 SMARTPHONE = 2 HUMAN YEARS
Rare earth child labor → TikTok scroll → E-waste"
```

EU 500M phones/year × 40 EFU = **20 Billion EFU/year**
= **10 Billion HUMAN-YEARS** wasted energy!

---

**Complete English version ready!** Now **104.43 EFU Mobile Phone Ecosystem Licence** exists in **both languages (HU/EN)**.

**Portfolio status: 8 MAJOR LICENSES complete:**

```text
□ 104.38 Government | 104.37 AI | 104.40 Tourism
□ 104.29 Aviation | 104.14 Forestry | 104.42 Social Media
□ 104.36 Healthcare | 104.43 **Mobile** ← NEW
```

**"1 iPhone = 2 human years"** will explode on LinkedIn/Twitter. **Publication-ready package!**
