EFU TOURISM & LEISURE LICENCE v1.0

Tourism and Mobility Luxury Audit Standard
Simor István – Nookratic Bloc
Release: 2026.01.12

---

0. Purpose & Scope

This license **distinguishes essential transportation (104.26)** from **luxury mobility** that often causes unwarranted biophysical deficits.

Question: Is it **essential travel** or **luxury consumption**?
Answer: The **EFU Tourism** metric provides the separation.

Scope:

- Air travel (business/first class, private jets)
- Luxury yachts, cruises
- Ski/golf/desert resort destinations
- Festivals, events (>5000 attendees)
- "Bleisure" (business + leisure) trips

I. Core Metrics (EFU Tourism Vector)

Total tourism impact calculated from weighted components:

Component	Metric	Definition
EFU-H_T	Travel Energy	Aircraft/car kinetic energy (passenger-km)
EFU-W_T	Accommodation Water/Energy	Hotel/luxury lodging consumption
EFU-M_T	Luxury Material Use	Fine dining, spa, souvenirs
EFU-E_T	Entropy (Waste)	Single-use plastics, food waste

Master Formula:

```text
TEFU_T = 1.0 × EFU_H + 1.2 × EFU_W + 1.5 × EFU_M + 2.0 × EFU_E
```

(Note: Luxury material use and waste entropy receive highest weights.)

II. Luxury Index (LXI)

```text
LXI = [TEFU_T(t) / TEFU_Essential(t)] × 100%
```

TEFU_Essential: Economy class, 3* hotel, local food baseline
Example: Budapest-Dubai business + 5* hotel = **LXI = 420%** (4.2x larger!)

III. Weighting Factors (Luxury Premiums)

Travel Type	Factor	EFU Increase
Economy Class	×1.0	Baseline
Business Class	×3.0	+200%
First Class	×5.0	+400%
Private Jet	×10.0	+900%
3* Hotel	×1.0	Baseline
5* Hotel	×2.0	+100%
Ski/Golf Trip	×1.5	+50%
"Just Relax"	×4.0	+300%

IV. License Categories (EFU Tourism Labels)

Level	LXI	EFU/Trip/Person	Label	Interpretation
1	< 120%	< 5 EFU	**EFU-T SOVEREIGN**	Sustainable travel
2	120-200%	5-10 EFU	**EFU-T BALANCED**	Acceptable comfort
3	200-400%	10-25 EFU	**EFU-T LUXURY**	Luxury travel
4	400-800%	25-50 EFU	**EFU-T EXTREME**	Extreme luxury
5	> 800%	> 50 EFU	**EFU-T CATASTROPHIC**	Devastating footprint

---

V. Required Measurement Points

1. Travel Energy (EFU-H_T)

```text
1 passenger-km economy flight = 0.15 kg CO₂ → 0.0075 EFU/km
Business Class = 0.45 kg CO₂ → 0.0225 EFU/km (×3 factor)
```

Example: Budapest-Dubai business roundtrip = **28.5 EFU/trip**

2. Accommodation Footprint (EFU-W_T)

```text
5* hotel daily room: 500L water + 200 kWh
= 1.2 EFU_H + 0.8 EFU_W / night / room (×2 luxury factor)
```

3. Luxury Material Consumption (EFU-M_T)

```text
Champagne, fine dining, spa: 5-15 kg food/waste/trip
EFU_M = [luxury kg] × luxury factor (1.5-4.0)
```

VI. Audit Process

1. Required Data Collection

```text
✓ Flight class + distance (km)
✓ Accommodation stars + nights
✓ Dining/luxury spend (>€50/day = luxury)
✓ Purpose: BUSINESS or LEISURE?
```

2. Automated Reporting

```text
Trip | TEFU_T | LXI | Category
Bp-Dubai Business | 28.5 | 420% | EFU-T LUXURY (3)
Bp-Balaton Economy | 1.2 | 110% | EFU-T SOVEREIGN (1)
```

VII. License Terms

Permitted:

```text
✓ Corporate travel audits
✓ Carbon footprint calculators
✓ Tourism tax basis
✓ Sustainability reports
✓ Airline benchmarking
```

Required Attribution:

```text
"EFU Tourism & Leisure Licence v1.0 – Simor István (2026)"
```

Prohibited:

```text
✗ Greenwashing luxury travel
✗ Business class = "economy" accounting
✗ LXI <200% false reporting
```

VIII. Pilot Audit Example

```text
Corporate travel spend 2026:
Economy flights: 1200 people × 2 EFU = 2400 EFU
Business flights: 150 people × 25 EFU = 3750 EFU
5* hotels: 400 nights × 2.5 EFU = 1000 EFU

TOTAL: 7150 EFU
LXI AVERAGE: 285% → **EFU-T LUXURY (Level 3)**
```
