104.58.6. Urban EFU Governance and Economic License

1. Local Economic Metabolism

Instead of a traditional profit-maximizing economy, the urban EFU license **rewards flux maximization and entropy minimization**.

The economy aims to **enhance district sovereignty** and increase the value of **residents' liberated human flux (H_f)**.

EFU Principle

Money is **not a tool for capital accumulation**, but a **signal system** for measuring and guiding fluxes.

---

2. Tokenized Resource Management (EFU Token)

The city implements an **internal accounting system** operating over the **104.54 (AI / Edge) network**.

- **Energy and Water Credits:**
  Residents and enterprises are rewarded for production (e.g., solar panels) or conservation.
- **Time Bank (H_f Re-investment):**
  Credits earned through community labor (e.g., repair workshops, mentoring, urban gardening) can be redeemed for **community services or technological tools**.
- **Entropy Tax:**
  Activities that burden the system (waste, noise, pollution) trigger **immediate digital deductions**.

---

3. Quasi-Autonomous Governance (DAO Districts)

Decision-making follows the **principle of subsidiarity**: all decisions are made at the **lowest effective level** (block or district).

- **Algorithmic Budgeting:**
  A portion of district revenues is **transparently allocated by AI** according to critical maintenance needs (e.g., pipeline preventative maintenance).
- **Participatory Democracy:**
  Residents vote directly over the **local Edge network** on redistribution channels (104.56).

---

4. Audit Indicators: Measuring Urban Success

Indicator	Name	Interpretation
GNI	Green Net Income	District revenue adjusted for its generated environmental entropy
LCI	Local Circulation Index	Ratio of money/tokens retained within the district versus outflow
QoL / EFU	Quality of Life / EFU	Residents' happiness index divided by district energy consumption

---

5. License Closure and Summary

The **104.58 module series** defines a city that:

- Measures and closes its metabolic processes (104.58.1)
- Consists of **islanded, operationally resilient districts** (104.58.2)
- Protects and enhances human interaction spaces (104.58.3)
- Maintains law enforcement as a **community immune system** (104.58.4)
- Achieves self-sustenance and waste recycling (104.58.5)
- Operates a **self-regulating, tokenized economy** (104.58.6)

The **entire 104.58 block is complete**, establishing the **theoretical framework of the EFU City**.
